

Bit Manipulation Cheat Sheet

 Topic	 Meaning	 Real-Life Analogy	 Example
AND (&)	1 if both bits are 1	Checking if two switches are <i>both ON</i> 	$5 \& 3 \rightarrow 1$ (0101 & 0011 = 0001)
OR ()	1 if <i>either</i> bit is 1	Turning on a room light from two switches 	$5 3 \rightarrow 7$ (0101 0011 = 0111)
XOR (^)	1 if bits are <i>different</i>	Door with two switches – toggle state 	$5 \wedge 3 \rightarrow 6$ (0101 ^ 0011 = 0110)
NOT (~)	Flips all bits	Mirror image reflection 	$\sim 5 \rightarrow -6$ (in 2's complement)
Left Shift (<<)	Shifts bits left ($\times 2$ each shift)	Moving digits left in math 	$5 << 1 \rightarrow 10$ (0101 \rightarrow 1010)
Right Shift (>>)	Shifts bits right ($\div 2$ each shift)	Moving digits right 	$5 >> 1 \rightarrow 2$ (0101 \rightarrow 0010)
Check ith Bit	$(\text{Num} >> i) \& 1$	Zooming in on 1 bit 	2nd bit of 5: $(5 >> 2) \& 1 \rightarrow 1$
Set ith Bit	$\text{Num} (1 << i)$	Turning a specific light ON 	Set 1st bit of 5: $5 (1 << 1) \rightarrow 7$
Clear ith Bit	$\text{Num} \& \sim(1 << i)$	Turning a specific light OFF 	Clear 0th bit of 5: $5 \& \sim(1 << 0) \rightarrow 4$
Toggle ith Bit	$\text{Num} \wedge (1 << i)$	Flip a specific switch 	Toggle 0th bit of 5: $5 \wedge (1 << 0) \rightarrow 4$
Count Set Bits	<code>bin(Num).count('1')</code>	Count ON switches in a panel 	<code>bin(5) \rightarrow '101' \rightarrow 2 bits set</code>
